We are thrilled to introduce you to the “DIGI-LEARN” project

The digital age is transforming how we live, connect, learn, and work. While it offers incredible opportunities for learning, it also highlights the need for continuous skill development. In this regard, the DIGI-LEARN project aims to equip European citizens with the skills to navigate the technology-driven changes in the workforce.

Over a 28-month period (1 December 2023 – 31 March 2026) and with a total budget of €250,000, this project aims to create effective digital literacy practices. In particular, it targets seniors and individuals with limited digital skills through a combination of online and face-to-face training activities.

01/03

Among its main objectives, DIGI-LEARN envisions to:

- Identify best practices in learning to learn in accessible digital spaces;
- Develop digital training materials designed for senior citizens and digitally underskilled individuals, in order to foster their ability to adapt and thrive in a fast-evolving technological landscape
- Create a methodological framework for educators working with marginalized adults facing social exclusion, long-term unemployment or migration backgrounds

Co-funded by
the European Union

femxa

The DIGI-LEARN project officially started with a **two-day kick off meeting** hosted by Spanish partner Femxa, in the Galician city of **Vigo (Spain)**, on last **March 26-27**. On this occasion, the partners had the opportunity to meet in presence for the first time, and immediately established an excellent collaboration while discussing the division of tasks and timelines.

Next meeting is scheduled for November 5-6, 2024, and will be hosted by Venetian Cluster in the uniquely beautiful setting of **Venice, Italy!**

The DIGI-Learn partnership:

- **Agis, Note et Innove (ANI International)**: an association that works on social inclusion, international solidarity and non-formal education.
- **Shoqata Together For Life (TFL)**: a non-profit organisation that helps strengthen the capacities and improve livelihood prospects of unprivileged communities.
- **Femxa Formación S.L.U.**: a training company specialized in training for employment, aimed at companies, public administration, consulting, professional offices, training centers and individuals.
- **Venetian Cluster Srl**: an organisation established to develop the Italian productive chain through public-private partnerships within the creative, cultural, and heritage sectors including environmental heritage.

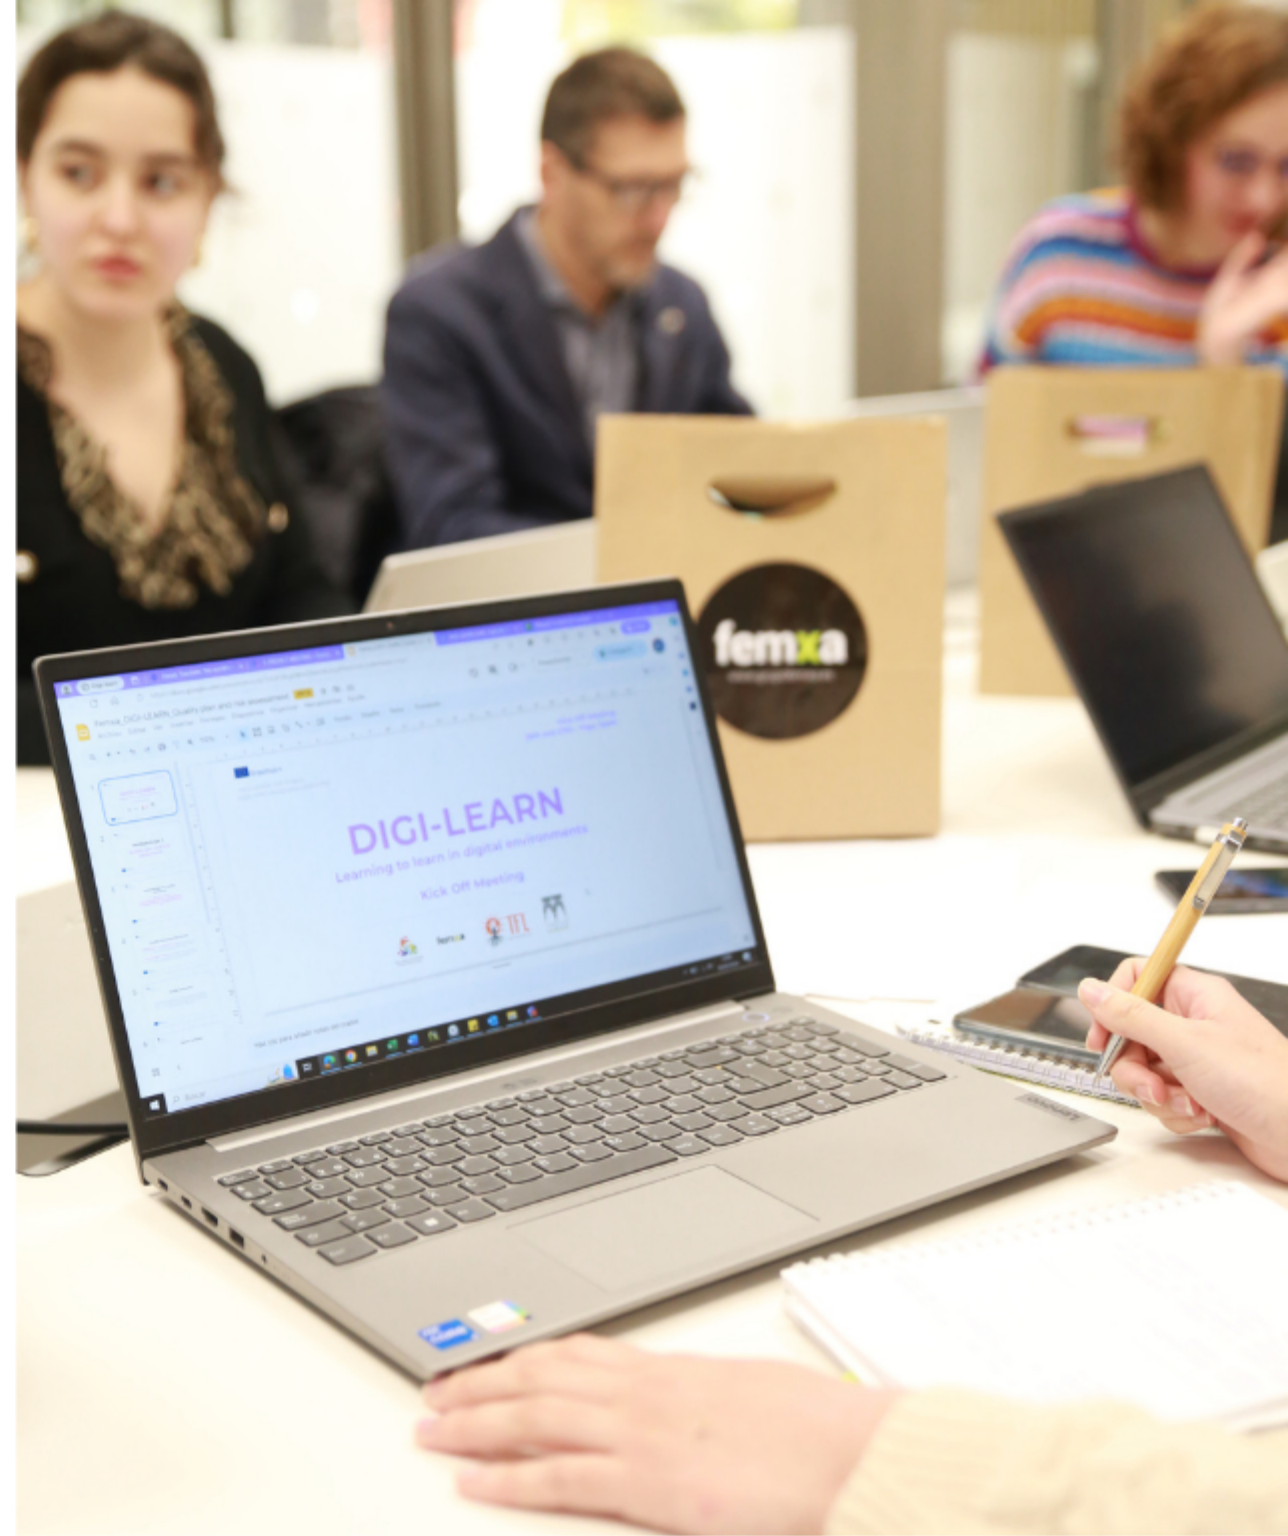

As for the partnership working behind the project, DIGI-LEARN boasts a **diverse consortium of organisations** made up of:

- 2 NGOs (ANI International; TFL)
- 1 VET provider (Femxa)
- 1 Innovation Cluster (Venetian Cluster)

02/03

What we are currently working on:

- a **desk research** exploring the digital landscape of 2023 in terms of internet use in each partner country, which will allow the project partners to **identify key demographic facts and trends**
- a **stakeholders' survey** which will help the project partners to **determine institutional requirements in seniors' digital education**
- a **collection of 3 to 5 best practices involving ICT adult learners**, which will focus on exploring successful approaches, upskilling initiatives and projects with a proven impact on bridging the digital skills gap
